Pearson Edexcel International GCSE (Chemistry) — Question Paper

Question 1 (a)

A student mixes magnesium chloride and copper sulfate solutions.
Explain, using ion equations, what is observed in the reaction.

Question 1 (b)

State the test for carbon dioxide gas and the positive result.

Turn over for Question 2

Question 2 (a)

Crude oil is separated by fractional distillation in a fractionating column. Describe how the fractions are collected in order of boiling point.

Question 2 (b)

Magnesium chloride can also be made by reacting magnesium oxide with hydrochloric acid. Write the balanced symbol equation.

Question 3

The bar chart shows the results of titration of magnesium chloride.
Calculate the concentration in mol per cubic decimetre.
